

## Managing Data in the Information Age

Accessing and understanding of your factory floor data play a critical role in operational efficiency and effectiveness. The goal is to transform the raw data into information that can be measured, monitored, and acted upon.

Each company is unique, and software solutions should be adaptable to support those unique process needs. Leveraging our business process and software solution assessment methodology, as well as our proven ability to design and build solutions, Sandalwood provides a user-friendly means to access and display information, speeding up the information flow between different departments, and realizing data-driven, standardized, and efficient management of your operations.

Do you have an automated means of collecting critical data from your factory floor?

Do you understand your plant floor business processes and how they relate to the systems and data they collect?

Do you have to retrieve data from multiple systems to understand the state of your manufacturing operations?

Are your existing methods getting the right information, to the right people, at the right time?

Do you have the information you need to reduce human errors and increase efficiency?

Are you protecting your information through industrial cybersecurity best practices?

### Where We Can Help!

Sandalwood has over 30 years' experience working with global manufacturers helping them work smarter and work safer. Leveraging a standardized approach to achieve early sustainable value, we assist our clients to effectively apply their efforts to the right people, processes, and technology. Let us and our skilled partner network help you realize your vision.
